Art Unit: 1743

## DETAILED ACTION

1. The applicant notified the examiner in interview on 02/10/04 that claims 17-19 were omitted from the consideration in the last Office action. The examiner admits the error and reissues the following Office action with reestablishing the due date for the applicant's reply. Claims 1-5 and 13-14 are cancelled without prejudice. Claims 6-12 and 15-29 are pending in the application.

## Response to Amendment

2. The rejection under 35 U.S.C. 112, second paragraph is withdrawn.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.
  - 2. Ascertaining the differences between the prior art and the claims at issue.
  - 3. Resolving the level of ordinary skill in the pertinent art.
  - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

Art Unit: 1743

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 6-9, 12, 15 and 20-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Surjaatmadja (US 5,192,509) in view of Pressley et al. (US 3,732,164).

Surjaatmadja discloses an apparatus for automatic titration, comprising: at least two input ports in fluid communication with a common channel, a detection zone having an input in fluid communication with the common channel and the output, a color detector for detecting the color of the fluid (e.g. any spectrophotometer, including ultraviolet, visible range spectrophotometer, etc. as indicated in col. 1), and control means connected to continuous flow type metering pumps to vary the composition of the fluid continuously and linearly (Figure and col. 2, lines 50-60). The control means are "preferably syringe-type pump that operate under control of a stepping motor" (col. 2, lines 58-62). "The automatic titration system 10 is capable of operation in a selected one of two modes, a batch processing mode and a continuous mode. The batch processing mode enables the sampling of a multiple of fluids which may then be subject to reaction to identify the types of fluids".

Surjaatmadja does not specifically disclose a multi-wavelength spectrophotometer, which can produce data at more than one wavelength, a scanning ultraviolet or visible range spectrophotometer in particular.

Pressley discloses a titration system used for "nitrogen removal from waste water by breakpoint chlorination" utilizing spectrophotometric scanning over a spectral range of 200-500  $\mu$  for determining other end-products besides the ones expected during titration reactions.

It would have been obvious for anyone of ordinary skill in the art to modify Surjaatmadja's apparatus by using scanning spectrophotometer with multi-wavelength capabilities disclosed by Pressley, because this expands the area of applying the apparatus for detecting all possible products besides those that are expected from titration reactions, exactly as indicated by Pressley.

Claims 12 and 20-22 recite a "use" limitation. This does not bear any patentable weight. Apparatus claims must be structurally distinguishable from the prior art in terms of structure not function. *In re Danley*, 120 USPQ 528, 531 (CCPA 1959); Hewlett-Packard Co. V. Baush and Lomb, Inc., 15 USPQ2nd 1525, 1528 (Fed. Cir. 1990).

Art Unit: 1743

7. Claims 10-11, 16-19 and 23-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Surjaatmadja in view of Pressley, as applied to claims 6-9 and 15, and further in view of Garrison et al. (US 4,810,331).

Surjaatmadja in view of Pressley do not specifically disclose autosampler in his apparatus.

Garrison discloses "surfactant sensing electrode for potentiometric titrations" and indicates, "it should be appreciated that potentiometric quantitation of surfactant samples using a coated-wire membrane electrode as described above can be automated by employing an autosampler in conjunction with a potentiometric titration instrument. In some cases, such potentiometric titrations may take as little as two minutes per sample, compared with thirty minutes per sample when using manual two-phase titration methods or chromatographic procedures" (col. 16, lines 30-39).

It would have been obvious for anyone of ordinary skill in the art to use autosampler in Surjaatmadja-Pressley's apparatus, as disclosed by Garrison, because Garrison specifically indicates advantages of automating the operation of the disclosed analytical device by employing such autosampler.

Claims 23-29 recite a "use" limitation. This does not bear any patentable weight: apparatus claims must be structurally distinguishable from the prior art in terms of structure not function. *In re Danley*, 120 USPQ 528, 531 (CCPA 1959); Hewlett-Packard Co. V. Baush and Lomb, Inc., 15 USPQ2nd 1525, 1528 (Fed. Cir. 1990).

## Response to Arguments

8. Applicant's arguments filed 07/30/03 have been fully considered. The rejections under 35 U.S.C. 112, second paragraph are withdrawn in view of the Applicants' remarks. The arguments with respect to prior art are moot in view of the new grounds of rejection.

The examiner would like to emphasize once more that a function of an apparatus is not considered to be a patentable limitation for the invention drawn to the apparatus.

Art Unit: 1743

## Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yelena G. Gakh, Ph.D. whose telephone number is (571) 272-1257. The examiner can normally be reached on 9:30 am - 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill A. Warden can be reached on (571) 272-1267. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
